

a--.

REMARKS

Applicant was asked to amend five matters in the application, and Applicant has accordingly amended the title, the specification, the abstract, and canceled claims 8-11 which were deemed doubling patenting with the parent application. As to the primary matter, application has also amended claims 1, 4 and 7. Claim 1 has been amended to define the substantially identical first second module which are respectively used with the corresponding first and second connectors wherein the first module and the second module are used in opposite manners so that the same positioned pads on the first and second modules are engaged with the differently positioned contacts of the first and the second connectors. It is believed that through this amendment stating two modules instead one module, the system as cited in the amended claim 1 clearly defines the whole interconnection arrangement among the two opposite connectors and the corresponding two substantially identical modules without confusion or indefiniteness thereof.

Applicant has made a sincere effort to put the application in condition for allowance. Reconsideration, allowance and passage to issuance of the claims as amended, are respectfully requested.

Respectfully submitted,

Choy et al.
